Locating Nearby Hospital

Problem Statement:

Now a days, at the time of medical emergency, it's too hard for locating the nearby Hospital, especially when you are in unknown city, town, place etc. The main idea is to pick the location of the user and compare it with the location of the Hospitals from our datasets. User will get this information on the single click. We will use Foursquare API for locating the user as well as hospital on the map. Nearest route will be suggested and displayed the map. System will send the "SMS" on the registered mobile number of the user. "SMS" will contain list of Name, Address, and other important details of the nearby hospital. For Project purpose, I will be the small dataset .
